EasyCut – Innovative tooling technology

Tools for woodworking

Simply better performance

Improved cutting quality, longer lifetime og lower noise level. This is only some of the advantages you will experience with the EasyCut tooling technology from Kyocera Unimerco.

EasyCut technology is developed with uneven teeth location which combine rough cutting and finish cutting in the same tool.

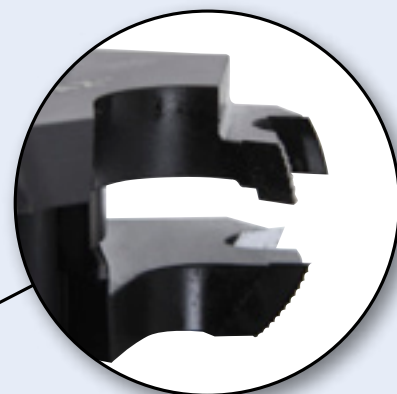

The roughing tooth remove the majority of the material, those the finish tooth only has to create the finish surface.

The EasyCut technology can be used for shank type tools as well as tools with bore, and for a lot of different applications.

Contact us and experience what EasyCut can do for you. We will be able to supply you with a solution on basis of you challenges.

DP tooling designed with EasyCut for counter profile.
Notice the uneven tooth location.

Kyocera Unimerco manufactures, distributes and services tools for machining, as well as measuring equipment for the manufacturing industry. The tooling concept comprises standard and customised tools, RE•NEW® tool maintenance, coating and optimisation guidance. The Danish company was established in 1964 and has product development, production, sales and service in the corporate headquarters, located in Denmark. The company is part of the Japan-based Kyocera, founded in 1959.
