

THE NEW VALUE FRONTIER

WOOD DIVISION | Tool Maintenance

# Tool Maintenance

RE•NEW™ in the woodworking industry

# Service and solutions that match your requirements

As your supplier it is our mission to make your working day easier. That is why we make it possible for you to leave the responsibility of your tooling maintenance to us. We will then endeavour to RE-NEW and return your tools back to you on time, every time.

We know that you cannot afford to stop production due to a lack of tools so we have ensured that we have plenty of machine capacity, securing short delivery times and excellent delivery reliability for your benefit.

## You will experience that...

### ...it is easy

All you have to do is pack up your tools in their original packaging and ship them to us at your convenience. When the tools have been through the RE-NEW process, we will inspect them and ship them back to you.

### ...it is customized to fit your needs

Your tools will normally undergo the standard RE-NEW process, which also entails exchange of PCD inserts/blanks, surface coating etc., when required. Any special requirements for one-off jobs or fixed special agreements for certain tool types will be managed through our computer system to ensure that your orders are always processed correctly.

### ...it is fast

Normally, you will receive your tools back from RE-NEW within 5 working days (carbide) or 10 working days (coated or PCD) after we have received them. Large quantities of tools, which need special repair, will be delivered upon agreement.

## Why RE-NEW™?

Our tool maintenance concept is much more than just regrinding. That is why we call it RE-NEW. Tools given the name RE-NEW will perform better than or equal to a new tool – with performance guarantee.

### ...it is safe

We have systematised the RE-NEW and re-coating processes. Advanced CNC machines, highly trained operators, norm management, databases and integrated routines will ensure that your tools are maintained optimally – each time.

### ...it reduces your costs

When you receive your tools from us, their quality and performance properties will be the same – every time. This enables you to continue working at the same high machining parameters, and therefore you will not experience any productivity reductions.

### ...it is followed up by professional guidance

We are always prepared to help and guide you with your tool maintenance. Please call your nearest Kyocera Unimerco service centre, and we will begin servicing your tools.

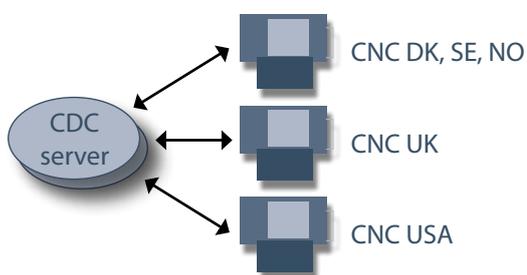

# 4 significant factors

## High-tech tool treatment

When you send your tools for RE-NEW they will undergo a managed inspection before we ship them back to you. In the process we will check if it is viable to repair/regrind your tools. Regrinding and restoring cutting geometries will be carried out on advanced CNC grinding machines.

The optimised process, many years of experience and state-of-the-art technology are just three factors that guarantee superior tool maintenance for you.

## Norm management

All tools are reground in accordance with the original geometries and/or norms. The RE-NEW instructions are developed and maintained centrally, but distributed to all Kyocera Unimerco companies via our international server.

This means that all CNC-controlled machines of all companies use the exact same machining data. The result is extreme accuracy and repeatability of original geometries – every time.

## Surface treatment

Coating can boost tool performance, prolong tool life and reduce scrapping in your production. Therefore, it is essential for your productivity that your coated tools are re-coated when they have been reground in order to restore the original geometries. The high-tech equipment in our in-house coating centre gives you maximum quality and ultra-thin, hard coating – and the coating process will not delay your delivery significantly.

## Special packaging

When your tools have been renewed we will make sure that you receive them undamaged.

Our special packaging has been developed to protect your tools during transportation. But it is also a professional and perfect way of storing your tools when they are not used.

## Industrial tooling solutions

Kyocera Unimerco is a global manufacturer and distributor, providing standard and customised cutting tool solutions as well as know-how and optimisation guidance for the manufacturing industry.

The company was founded in 1964 and has since expanded into 17 countries, with more than 700 employees.

Today the company is part of the Japan-based Kyocera Corporation.

In 1998 the Lichfield technology centre was established. It is focused on effective standard and customised tooling solutions for the industrial market.
